WINTER ENERGY SAVING TIPS

- Save five to ten percent on your heating costs when you lower your thermostat five degrees for four or more hours each day. The recommended setting for winter is 68°F while at home; 58°F while asleep or away from home.
- Set your home's heating and cooling system to work around your schedule with a programmable thermostat. This simple change can provide household comfort, real energy savings and lower energy bills.
- Remove excess snow from your roof and keep your roof cold to help prevent ice dams. Keeping roof vents open allows warm, moist air to escape to the outside.

WINTER DRIVING TIPS

Be Able to See and Be Seen—Clean frost and snow off all windows, mirrors, lights and reflectors. Equip your car with good wiper blades and keep an ample supply of windshield washer fluid.

Get a Feel for the Road—When you first start out, accelerate carefully to test wheel-spin and brake gently to test skidding.

Be Gentle—Use the brakes slowly to maintain control of your vehicle. Fast acceleration can make wheels spin on ice and snow. Brake with a gentle pumping action. Stepping too hard on the pedal will lock the brakes and cause loss of steering control.

Increase Your Following Distance—Ice or snow can multiply your stopping distance up to ten times.

MAKING A WINTER DRIVING SURVIVAL KIT

Use an empty three-pound coffee can or any similar container with a plastic cover to store the following items:

Small candles and matches	Pencil and paper
Small, sharp knife and plastic spoons	Safety pins
Red bandana or cloth	Whistle
Large, plastic garbage bag	Snacks
Plastic flashlight and batteries	Cell phone charger

Reverse batteries in the flashlight to avoid accidental switching and burnout. Warm batteries before using them. Store safety items in the passenger compartment when severe weather threatens in case the trunk is jammed or frozen shut.
